SOFTWARE RELEASE NOTES

MCS-CONNECT
Version 15.00H
08/29/2014

Updates from previous versions:

New Features:

1. Reworked the Workspace menus to include Radio buttons that specify the current selected workspace. Added a new menu item that allows the user to delete all workspace setups except the current one.
2. Added new members to the Graphics widget to allow background and foreground color as well as font to be set on widgets.

Bug Fixes:

1. When changing the value of the new "ROC Int." column in the setpoint grid the value was being multiplied by 10 to adjust for the decimal place of the setpoint. This was incorrect as this column is always a 0 decimal value. RESOLUTION - Added a test to ensure that this column was not adjusted before sending it to the controller.
2. The RO Combo Box drop down in the AO grid for the V11 class are testing with incorrect indexes to determine if the selected RO is in the range of usable ROs. RESOLUTION - Corrected the indexes to cover the correct range.
3. V14 EXV Grid, Level Target column is getting its value from a different place in SW 14.06 and later.
