## NOTES:

- Sensors MUST use shielded cable and shield must not be broken.
- All shields for sensors are to be wired to Earth Ground.
- All sensor inputs are 0 to 5Vdc.
- If a MCS-RO-BASE, MCS-SI-BASE, OR MCS-IO-BASE has an MCS-RO-EXT, MCS-SI-EXT, OR MCS-IO-EXT installed, the EXT address is the BASE +1.  
Example: MCS-IO-BASE Address = 1  
MCS-IO-EXT Address = 2
- Amp input sensors are field wired and must be shielded cable. They generate their own voltage and do not require 5Vdc from the MCS boards.
- Digital input sensors are field wired and must be shielded cable. The 5Vdc is taken from the sensor terminal and wired through the switch. The jumper must then be set to digital.
- Use copper wire only.
- External Main Power Disconnect must be provided by others.
