For Immediate Release

February 2016

Micro Control Systems announces . . .

Redesign of the MicroMag

MCS announces improved quality and overall functionality of the MicroMag, by adding a **NEW COVER** and a second RS-485 port as shown in the photos.

The LCD is now REVERSIBLE.

The MicroMag can be installed, mounted inside your enclosure as shown or can be mounted to the front of an enclosure.

The MicroMag is a rugged microprocessor based controller designed for the hostile environment of the HVAC/R industry. It is designed to be the primary manager of the package it is controlling. The MicroMag provides flexibility with set points and control options that can be selected prior to commissioning a system or when the unit is live and functioning.

Both RS-485 ports allow the user to interactively communicate with the MicroMag via **MCS-CONNECT**. A BMS (Building Management System) running Modbus RTU or BACnet MSTP can also communicate with the MicroMag via the RS-485 port for monitoring purposes.
