

MCS Release Note

Product Type: MCS-Connect Software Revision: 19.01.20I

Release Date: June 19, 2026

Release 19.01.20I - Friday, June 19, 2026 Log:

Summary:

- This release provides critical stability improvements for multi-device configurations, adds rapid start diagnostic capabilities for enhanced operational monitoring, and strengthens Plant Manager device support with improved data handling and configuration reliability.

Bug Fixes:

- Resolved multi-device point handling issue
- Corrected data display formatting for Plant Manager device sensors and control modules, ensuring proper value types and decimal precision
- Fixed device configuration data compatibility issues

Enhancements:

- Extended Plant Manager support with comprehensive alarm history tracking including unit and device-specific performance data
- Implemented optimized printing for Plant Manager device status displays
- Introduced rapid start status monitoring for individual device circuits
- Improved configuration editors with device restart indicators and value scaling adjustments
- Strengthened device configuration save and restore reliability against data corruption errors
- Enhanced network device discovery and communication configuration options
- Refined user interface formatting and display layout optimization
- Streamlined system startup and component initialization processes

Features:

- Dynamic rapid start diagnostics display for individual device circuits
- Detailed rapid start status tracking with automatic display controls that respond to device configuration settings
- Unified circuit status presentation for consistent appearance in all operating modes
